

Utah State University Bear Lake Observatory Weekly Riometer Analysis

Prepared by:
Robert Call

Reviewed by:
Jennifer Albretsen

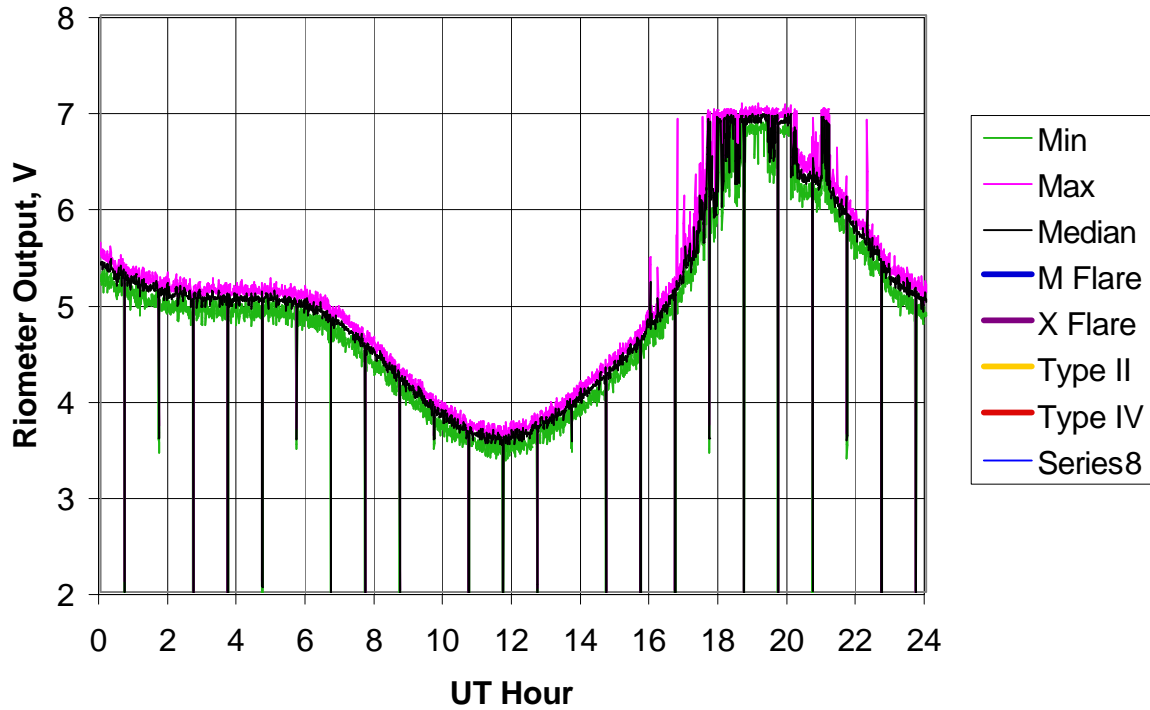

Remarks:

Starting on the 30th the median became much larger than normal we'll have to see if that continues.

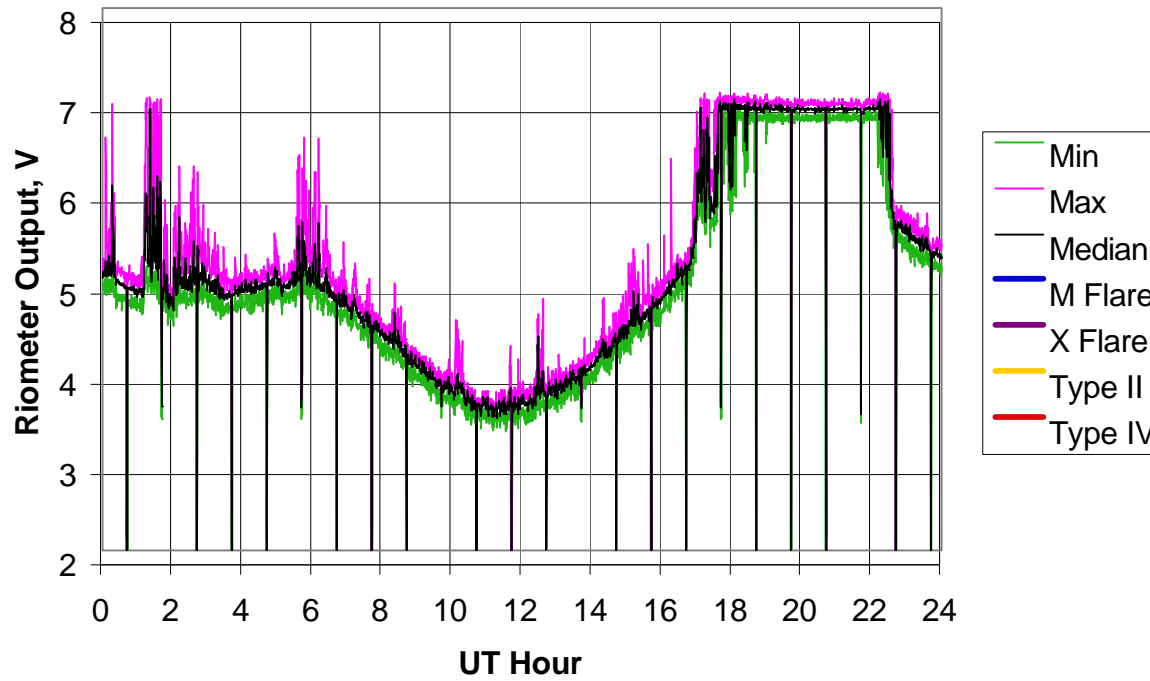

The 31st has a strange dip around 0400 UT.

Interference seems to start about 1700 UT everyday; could be sun related since that is a few hours after sunrise and interference goes until a few hours before sunset.
